

a Frozen input and shortlist

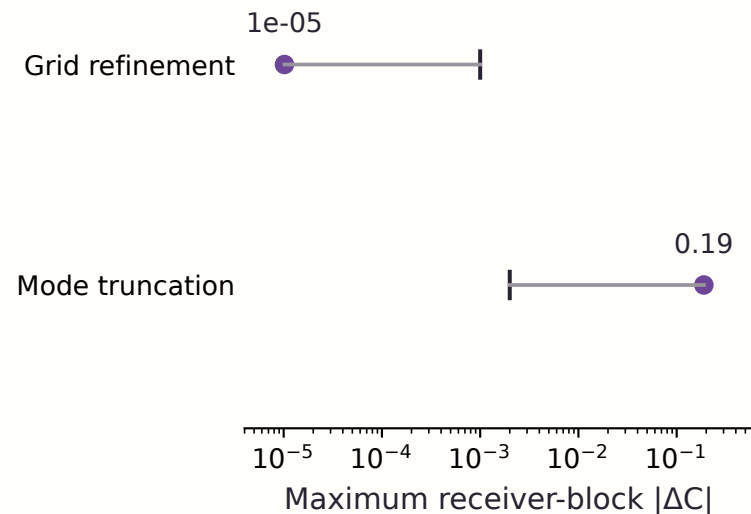

- Input P16 receiver
- Primary top five

b Known contacts rank poorly

Dots: observed. Gray: matched-label median and central 95% null interval. Larger ranks indicate higher priority.

c Grid passes; truncation fails

Dots: error; marks: locked limits. Grid: 33^2 versus 65^2 . Modes: two versus 750. Harmonic dynamics for mode check.

1OPL kinase-domain coordinates only; no superposed 5MO4 ligand is drawn. Residue 385 is absent from the reference. The primary shortlist contains 0 known contacts among 4 observed residues and 1 unknown; contact recovery is not functional validation.
